What Are Some Problems with Static Wireframes?

**HTML Wireframes show
the structure of a web
page in the browser.**

“You start out with a big slab of rock, and slowly chip away to get the rough shape of the form you’re creating. You take another pass at it to get a better sense of the object you’re trying to extract from the stone. You take another pass to start getting a bit more detailed. Eventually, you start honing in on a particular aspect of the form: a face, the arms, or the torso. Slowly but surely you detail each section of the sculpture until you’ve arrived at the final form.”

Brad Frost, HTML Wireframes
