The Cottage Garden

The *cottage garden* is a distinct style of garden that uses an informal design, dense planting and a mixture of ornamental and edible plants.

The Cottage Garden originated in [England](#) and its history can be traced back for centuries, although they were re-invented in 1870's England, when stylized versions were formed as a reaction to the more structured and rigorously maintained [English estate gardens](#).

The earliest cottage gardens were more practical than their modern descendants, with an emphasis on vegetables and herbs, along with some fruit trees.

From Garden to Plate

A *potager* is a French term for an ornamental vegetable or kitchen garden. Often flowers (edible and non-edible) and herbs are planted with the vegetables to enhance the garden's beauty. The goal is to make the function of providing food aesthetically pleasing.

What to Plant

Plants are chosen as much for their functionality as for their color and form. Many are trained to grow upward. A well-designed potager can provide food, cut flowers and herbs for the home with very little maintenance. Potagers can disguise their function of providing for a home in a wide array of forms - from the carefree style of the cottage garden to the formality of a knot garden.

Making the Link

CSS can be added as part of the HTML document (internally) or as a separate .css file (externally)

Making the Link

It is best practice to use external CSS.

That way, the same sheet can be shared by multiple pages and you only have to make changes in one place.

Making the Link

Use the <link> element in the <HEAD> to make the link between the HTML and CSS.

```
<html>
  <head>
    <title>Using External CSS</title>
    <link href="css/styles.css"
          type="text/css"
          rel="stylesheet">
  </head>
  <body>
    <h1>Potatoes</h1>
    <p>There are dozens of...</p>
  </body>
</html>
```

CodePen & CSS

CodePen makes the link between
HTML and CSS automatically.
Regular HTML will not.

Potatoes

There are *dozens* of different **potato** varieties.

They are usually described as early, second early and maincrop potatoes.

Browsers

Browsers interpret CSS in different ways.

You must test in all browsers before launching a web project.

Style TILES

A Visual Web Design Process *for Clients & the Responsive Web*

■ WHAT ARE STYLE TILES? ■

Style Tiles are a design deliverable consisting of fonts, colors and interface elements that communicate the essence of a visual brand for the web.

They help form a common visual language between the designers and the stakeholders and provide a catalyst for discussions around the preferences and goals of the client.

DOWNLOAD TEMPLATE 

Style Tiles are similar to the paint chips and fabric swatches an interior designer gets approval on before designing a room. An interior designer doesn't design three different rooms for a client at the first kick-off meeting, so why do Web designers design three different webpage mockups?

Present clients with interface choices without making the investment in multiple photoshop mockups.

■ WHEN TO USE STYLE TILES? ■

“Style tiles are a flexible starting point that define a style to communicate the web in a way clients understand. A style tile is more refined than a traditional mood board and less detailed than a website mockup or comp.”

“...the goal of a **Style Prototype** is to allow a client to get a visual summary of a site’s proposed design direction without the time investment of creating multiple pages of Photoshop comps or fully developing HTML pages.”

Jeremy Lloyd: Our New Responsive Design Deliverable: The Style Prototype

http://seesparkbox.com/foundry/our_new_responsive_design_deliverable_the_style_prototype

“The web affords us a wonderful opportunity: to be able to design and test a design in the actual medium for which we’re designing. It’s time to stop designing pictures of websites and start designing all aspects of the user experience simultaneously and in a practical way.”
